## DETAILED ACTION

### *Claim Rejections - 35 USC § 112*

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 12-45 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The evidence provided for 09/112219, of which this application is a continuation, in the Declaration under Rule 132 by Kazufumi Ogawa and the Declaration under Rule 132 by Midori Takano demonstrates that by coating a glass substrate having an indium-tin oxide alloy film with the product formed by dissolving 1 weight percent  $\text{Cl}-(\text{SiCl}_2\text{O}_2)_2-\text{SiCl}_3$  in chloroform solvent, a silicon oxide film is formed on the glass substrate. It is noted, however, that the present specification teaches that contacting a substrate with a solvent comprising a material comprising chlorosilyl groups, such as  $\text{Cl}-(\text{SiCl}_2\text{O}_2)_2-\text{SiCl}_3$ , results in a siloxane film, rather than a silicon oxide film, on the substrate.

In view of the evidence discussed above, it appears that the present specification does not teach how to make a siloxane film on a substrate as presently claimed.

The applicant has failed to clarify this issue in the January 22, 2003 response. The Ogawa declaration of April 1, 2002 states on page 3, under "Analytical Results", that the

Art Unit: 1762

“siloxane polymer coating film of 09/112219 (Example 1) is identical to a “silica film” formed by sputtering. The applicant states in the January 22, 2003 response that “...the “silica” of the PPG patent and the siloxane film of this invention are silicon oxide films have substantially identical compositions.” (page 2) This is not helpful in distinguishing between siloxane and silica. A siloxane is expected to bond to a surface having hydroxyl groups through oxygen atoms, whereas a silica by definition is  $\text{SiO}_2$ , and has no open valences for bonding.

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 37 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

a) Claim 37: “number of a group” does not make sense.

This was not addressed in the January 22, 2003 response.

#### *Conclusion*

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after

Art Unit: 1762

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
